

High Voltage Electrical Engineer for Renewables

Deadline:
25-08-2026

Do you want to play a leading role in transforming the global energy sector from fossil fuels to renewable? Then this is your chance. Join us!

Contact data:
Thomas V. M. Christiansen

Your position

In your new position as Electrical Engineer in the Renewables division, you will be a valuable member of the dedicated High Voltage Equipment team who is responsible for driving designs, installations, tests and commissioning of medium- and high voltage projects for large and specialized offshore substation projects.

We are looking for an experienced specialist or an ambitious individual aiming to become an expert in High Voltage Equipment for offshore use. You will collaborate with highly skilled colleagues and can play a crucial role in designing offshore substations, from the tender phase through to commissioning.

Location:
PL - Gdynia

Here, you will work with some of the brightest and most skilled engineers in developing technical solutions to our customers all over the world. You will have the exciting chance to bring your knowledge into work in the core area of high voltage systems. Above all, your work will make a real change for the global energy sector.

You will be working from our office in Gdynia, Poland. The position is full-time, and you can expect 10-30 travel days per year.

"As part of the high voltage team, we get to contribute to some of the largest offshore substations the world has ever seen. You will travel to different countries and will be working with team members from multiple cultures. Further you will have the opportunity to involve in both the theoretical and practical aspects of offshore wind farm projects. This is done in an informal atmosphere with high focus on knowledge sharing and development," says Colleagues from the Electrical department.

Your tasks & responsibilities

In the role you will be responsible for driving part of the high voltage scope of the projects. You will be the technical design responsible of own scope and in cooperation with the project team oversee compliance of the time schedule and budget, to ensure the project's successful completion.

Your tasks will include but are not limited to:

- Responsible for design, calculations and engineering of HV/MV equipment in our EPC projects.
- Handling suppliers, negotiations and contracts in cooperation with the project team and procurement department.
- Planning and potentially attending FAT, HAT, SAT, commissioning and handover of projects to clients and their O&M organisation.
- Developing, optimizing and standardizing technical solutions, as well as participating and supporting tenders.

Your profile & qualifications

As a person you are dedicated and proud of what you do, you are trustworthy, positive and a team player. Furthermore, you should be able to collaborate with both external and internal stakeholders and have a proactive, analytical and organized approach to your work.

To succeed in this position, we expect you to have:

- A bachelor's or master's degree in Electrical Engineering, High Voltage Electrical Power Systems or Electrical Installation Engineer.
- Experience in designing high voltage components such as High- and Medium Voltage GIS and oil-immersed equipment.

- Practical experience in the installation, testing, and commissioning of high voltage equipment, as well as knowledge of offshore design requirements, is beneficial.
- An understanding of project management and detailed engineering from offshore substations or other relevant electrical projects.
- Can communicate in English, both verbal and written.
- You should be the go-to person for technical clarifications and possess a good sense of humour, which is always appreciated at Semco Maritime.

Welcome to Semco Maritime

At Semco Maritime, we create change. For people. For projects. And for the global energy sector. With us, you will join a community of over 2,400 of the most dedicated thinkers and doers in the energy industry who are driving real change and making their own personal mark on the global energy landscape.

While everyone knows *why* the energy transition is vital, we are concerned with the journey. *How* to get there. By providing the answers needed to make change real.

Because we believe that global energy ambitions can only be realized through hard work and clever pragmatic solutions. This is what we do. This is what we invite you to participate in.

So yes, working for us will change the energy sector – and may well change you too.

Care to join the movement?

Change. With us.

We conduct our interviews on an ongoing basis starting from end of August due to holiday season in Denmark, so if you are interested, please submit your application as soon as possible via the link on the page.

If you have any questions, you are more than welcome to contact Thomas V. M.
