

# Process Engineer for main process

*Are you an experienced and detail-oriented Process Engineer with flair for execution looking for a new challenge? If so, we have the opportunity in a position where your dedication will impact our projects, partnerships and people.*

## **Your position**

In your onshore position as Process Engineer in the Consulting Services team you will be a valuable member of a dedicated team whose mission is to support our clients to achieve success in their energy projects within energy infrastructure in oil & gas.

Your place of work will be either at our Global HQ located in Esbjerg or at one of our locations in Copenhagen, Poland or UK.

The position is full-time and 10 - 50 travel days per year offshore and onshore to clients should be expected.

*“Joining our team means not only being part of an exciting project but also shaping its success. As we establish our new Consultant Services department, your expertise will be instrumental in setting the standards and making a tangible impact on our journey towards driving real change,”* says Daniel Billstrøm, Director, Consulting Services.

## **The set-up**

You will be hired as a Semco Maritime employee and work in a team dedicated to one of our national or international customers.

## **Your tasks & responsibilities**

As a Process Engineer with focus on main process your tasks and responsibilities will encompass, but are not limited to:

- Responsible for establishing and developing project execution schedules for an EPC project disciplines in all phases of projects, based on resource management, method & planning management philosophy and strategy.
- Responsible for ensuring that activities within the area are carried out in accordance with project requirements and the company's procedures.
- Responsible for the dedicated discipline schedule and resource need in all phases of the project.
- Ensure improvement projects for continuously embedding work efficiency initiatives and measures into the planning function. With high focus on digitalization and automation of processes.
- Contribute to continual improvement of planning functions in project.
- Monitor all discipline progress and budget developments based on the approved schedule and budget details.
- Establish reporting structures for progress and resource need to project stakeholders.
- Control of schedule discipline deviations caused by changes, delays, resource limitations or other factors. Perform re-scheduling where necessary to secure overall schedule.
- Contribute into consequence analysis to determine discipline consequences.

The tasks will depend on the specific client's needs.

## **Your profile & qualifications**

We are looking for experienced and detail-oriented Process Engineer who is passionate about getting tasks executed and scheduling who wants to leave their personal mark on the tasks. You have a proactive and organized approach to your work and are eager to contribute to our clients and your team's success.

To succeed in this position, we imagine that you have:

- A bachelor's or master's degree in engineering.
- Experience from installation and/or commissioning planning.
- At least 3 years' experience within oil & gas industry.
- The ability to acquire detailed knowledge of the scope of the project and handle a range of different disciplines or fields within planning.
- Skills to tackle complex situations or problems by using combined skills of different disciplines to develop holistic solutions.

- Good collaborative skills, outgoing and good abilities for working in team. Proactive and transparent attitude against team interaction and towards clients. Focusing on honesty, predictability, and transparency in all aspects of the work.
- Committed keen eye on HSSE in projects.
- Experience from industry planning software, such as Safran Project and Primavera P6. Core Planning System in Segment is Safran Project.
- Experience from method and execution system such as MIPS - Method Integrated Project System or other relevant system.
- In general, good knowledge and skills in common IT tools.
- Knowledge of Norwegian language is an advantage.
- Excellent verbal and written English communication skills at a professional level.
