

Student Assistant, Telecom Engineering

Deadline:
30-08-2026

Are you eager to gain hands-on experience within Telecom Engineering while contributing to projects in the global energy sector?

Contact data:
Henrik Michael Løwe

Your Position

Join our Telecom Engineering team in Esbjerg and gain practical experience while working alongside experienced engineers supporting communication systems, networks, and telecom solutions across energy projects worldwide.

Location:
Denmark , DK - Esbjerg

At Semco Maritime safety is a core value, and in this role, you will contribute to maintaining and promoting a strong safety culture while delivering innovative solutions. Above all, your work will make a real change for the global energy sector. We are looking for a highly motivated student with strong technical curiosity and a desire to learn. The position offers practical experience from real engineering projects where you will work closely with experienced engineers and gain insight into Telecom Engineering in the global energy sector.

The position is based in Esbjerg, and we expect approximately 15 hours of work per week, planned around your studies.

Your Tasks & Responsibilities

As our new Student Assistant, you will support Telecom Engineering in documentation, communication systems, networks, and development activities across energy projects. Your assignments will vary from practical day-to-day support to engineering-related activities. You will work closely with experienced telecom engineers, learn from project activities, and gradually take on more technical responsibilities as your knowledge and confidence grow.

Depending on your interests and development, you may also become involved in smaller development, automation, digitalization, or optimization projects.

Your tasks may include, but are not limited to:

- Supporting Telecom Engineering in documentation, communication systems, networks, and development activities across energy projects
- Preparing, configuring, and setting up equipment for testing and demonstrations
- Unpacking, labeling, registering, and maintaining project equipment and materials
- Updating documentation, engineering records, and project information
- Supporting development, automation, optimization, and other ad hoc activities within the team

We believe that understanding the practical aspects of engineering is just as important as developing technical knowledge. Therefore, no task is too small if it contributes to the success of the team and our projects. At the same time, you will work closely with experienced telecom engineers, learn from project activities, and gradually take on more technical responsibilities as your knowledge and confidence grow.

The role is intended as a development opportunity for students who may later continue their career at Semco Maritime.

Your Profile & Qualifications

We are not looking for a student who already knows telecom. We are looking for a highly motivated student within Telecommunications, Electronics, Electrical Engineering, Industrial Electronics, IT, Networking, Software Engineering, Cyber Security, or a similar technical discipline. Most importantly, you are curious, eager to learn, and excited about developing your skills through hands-on experience in a professional engineering environment.

To succeed in this position, we imagine that you have:

- Studying Telecommunications Engineering or a similar relevant technical discipline

- Have at least two years remaining of your studies
- Are highly motivated to learn and develop your technical competencies
- Have a structured and analytical approach to your work
- Enjoy solving technical challenges
- Are comfortable working both independently and as part of a team
- Communicate well in English

Experience with telecommunications, networking, automation, scripting, AI tools, or data analysis is considered an advantage, but not a requirement.

Welcome to Semco Maritime

At Semco Maritime, we create change. For people. For projects. And for the global energy sector. With us, you will join a community of over 2,300 of the most dedicated thinkers and doers in the energy industry who are driving real change and making their own personal mark on the global energy landscape.

While everyone knows *why* the energy transition is vital, we are concerned with the journey. *How* to get there. By providing the answers needed to make change real.

Because we believe that global energy ambitions can only be realized through hard work and clever pragmatic solutions. This is what we do. This is what we invite you to participate in.

Safety is at the core of everything we do, and we are committed to protecting our people, partners, and the planet as we work towards a sustainable energy future.

So yes, working for us will change the energy sector – and may well change you too.

We know that our people are our greatest strength. We strive to build an inclusive workplace where everyone can be themselves, contribute their perspectives, and feel part of the team. We welcome applicants from all backgrounds and believe that diverse teams help us find better solutions and move the energy transition forward.

Care to join the movement?

Change. With us.
