

Senior Mechanical Engineer for Offshore Substations

Are you passionate about mechanical and multi-disciplinary systems and eager to contribute to the global shift towards a greener future? If so, we have an exciting opportunity for you!

Your position

At Semco Maritime, you'll become a key member of our experienced and highly skilled team in the Renewables Division, where we manage one of the world's largest portfolios of offshore substation projects. This position is based at our head office in Esbjerg.

Your tasks & responsibilities

As our new Mechanical Engineer, you will primarily be involved in greenfield EPCI (Engineering, Procurement, Construction, and Installation) contracts for offshore substation projects. This means that you will be working with everything related to the projects, all the way from being responsible for cost, hours, and quality for the mechanical systems within a project, to supporting the site during construction and commissioning.

An important part of this position also includes aligning with external and internal stakeholders when creating proposals, technical solutions and carrying out project documentation.

Key responsibilities include, but are not limited to:

- Designing, documenting, and coordinating the procurement of mechanical solutions in collaboration with our procurement team.
- Coordinating and resolving issues with customers, suppliers, and project teams across various disciplines.
- Facilitating and participating in client workshops and meetings to ensure alignment of scope and technical solutions with contract requirements.
- Clarifying client needs during both tender and project phases.
- Ensuring the successful execution and sign-off of Factory Acceptance Tests (FAT) and Site Acceptance Tests (SAT) in alignment with the project timeline.
- Contributing to concept development and optimizing technical solutions.

Your profile

While your title will be "Senior Mechanical Engineer," you will work across multi-disciplinary systems such as diesel generator and diesel fuel systems. A comprehensive understanding of mechanical, electrical, and control disciplines within these systems is crucial. You believe that success is driven by strong teamwork and collaboration.

To succeed in this position, we expect that you:

- Hold a bachelor's or master's degree in mechanical engineering, marine engineering or similar
- Have EPC project execution skills
- Have preferably experience with diesel generator systems
- Preferably have worked in the offshore field

Welcome to Semco Maritime

At Semco Maritime, we create change. For people. For projects. And for the global energy sector. With us, you will join a community of over 2,400 of the most dedicated thinkers and doers in the energy industry who are driving real change and making their own personal mark on the global energy landscape.

While everyone knows why the energy transition is vital, we are concerned with the journey. How to get there. By providing the answers needed to make change real. Because we believe that global energy ambitions can only be realized through hard work and clever pragmatic solutions. This is what we do. This is what we invite you to participate in.

So yes, working for us will change the energy sector – and may well change you too.

Care to join the movement?

Change. With us.

Interviews will be conducted on an ongoing basis, so if you're interested, please submit your application as soon as possible through the link provided on this page.

If you have any questions, you are welcome to contact Manager for Mechanical Systems, Rafid Kajo, at +45 7916 6867.
